Note: The SIP Specification section is (also) a derivative work of IETF RFC 5411 - 'A Hitchhiker's Guide to the Session Initiation Protocol (SIP)' (1/2009). All rights of that portion are reserved to IETF and the distinguished author. In that regard we like to express again our admiration to the work of PhD. Jonathan Rosenberg, who has paved the SIP way in the IP telephony galaxy for many followers; us among them.
